

## P05 React Native (2)

1

Create a simple React Native / Expo App that shows weather data for a certain location:

Weather data can be retrieved from various sources, e.g.:

- OpenWeatherMap (free API key necessary)  
<https://openweathermap.org/api>
- wttr.in, a console-oriented weather forecast service  
<https://github.com/chubin/wttr.in>

2

(Optional) Manage state in the app using the *useReducer* hook.

3

(Optional) Improve the app.

Some ideas: better design, add forecast, list of locations, ...
